### Sample Information

From StoneWall Test performed N/A  
 Strain Silvertip Notes \_\_\_\_\_  
 Test Date 12/21/2010 Test end date 12/22/2010

Cannabinoid Profile (%/volume):			Calculated (%/500mg):
(%/volume)	(Present/Absent)		
CBD ≤1%	CBC Present		CBD ≤1%
CBN ≤1%	CBG Present		CBN ≤1%
THC ≤17.4%	THCV Absent		THC ≤17.4%**
THCA ≤19.21%	Cannabinoid Acids Present, Low***		
<b>Total Potential THC*</b>			<b>≤19.82%</b>

Relative Ratio of Cannabinoids (TAC):				% of TAC:
CBD:	CBN:	THC:	Others (CBC, CBG, THC V):	CBD ≤1%
0.6:1	0.4:1	6:1	0.2:1	CBN ≤1%
				THC ≤97%
<b>Total Assayable Cannabinoids (TAC)</b>				<b>Total 100%</b>

\* **Total Potential THC** if all THCA is converted to THC. Therefore, the **Total Potential THC** is the sum of the THCA with the present THC in the submitted samples.

\*\* **THC**, levels as tested under lab conditions, optimal THCA decarboxylation.

\*\*\* **Cannabinoid Acids**, Relative levels of acids present after Lab optimized decarboxylation analysis.

Thank you for choosing **Montana BioTech** for your analytical needs. This report outlines the results of your products analysis. If you have any further questions regarding your product, feel free to contact us.
